FoodShare – UI/UX Design Document

Oct 22, 2026 · @momo

Design direction

The look is fresh, warm and food-first: soft off-white backgrounds, a deep green brand colour, rounded cards and large friendly headings, in the spirit of a nutrition and diet planning website.

Reference caveat. I could not open the Dribbble shot (the page returned no content), so this direction is inferred from its title only. Attach a screenshot of it and I will align colours, layout and components to the actual design.

Principles

- Food photography and clear quantities lead every card.
- One primary action per screen (Post, Claim, Pick up, Deliver).
- Status is always visible and always the same colour and icon.
- Generous whitespace and large rounded cards keep the feel calm and trustworthy.

Design system

Proposed tokens; adjust once the reference is confirmed.

Token	Value	Use
Background	#FAF8F3	Page
Surface	#FFFFFF	Cards
Primary	#2F7D4F	Buttons, links, brand
Primary dark	#14332A	Headings, nav
Primary tint	#E8F3EC	Chips, highlights
Accent	#F2994A	Urgency, expiring soon
Text	#1F2A24	Body
Border	#E4E1D8	Dividers, card outlines

Status colours (always paired with an icon and a label)

Status	Colour	Icon
Available	#2F7D4F	Leaf
Claimed	#E0A526	Hand
In transit	#3B82C4	Bike or truck
Delivered	#14332A	Check
Cancelled	#8A8F8B	Cross

Type and shape. Poppins 600 for headings (32, 24, 20), Inter 400/500 for body (16, 14). Corner radius 16 on cards and 999 on chips and buttons. Spacing in steps of 8. Soft shadow only on hover.

Core components: listing card, status pill, role badge, filter bar with radius slider, map with pins, stat tile, timeline stepper, toast, empty state.

Key screens

Screen	Role	Layout and content
Landing	Public	Hero with headline, live counter of meals saved, three role cards, how-it-works in three steps
Sign up and log in	Public	Two-column form; role picker as three large cards
Nearby feed	Receiver, Volunteer	Left list of listing cards, right map; radius slider (1 to 10 km), category chips, sort by distance
Listing detail	All	Photo, title, quantity, expiry countdown, donor, address, status stepper, one primary button for the role
Post surplus	Donor	Form with category, quantity in kg, expiry picker, pickup note, map pin picker
Pickup board	Volunteer	Claimed listings with distance from the volunteer, Pick up button
My activity	All	Tabs: Active and History; each row shows status pill and timeline
Impact dashboard	All	Four stat tiles (meals saved, kg rescued, CO2 avoided, deliveries), daily trend chart, category breakdown, top donors and receivers

Home by role. Donor opens on Post surplus and My activity; Receiver on Nearby feed; Volunteer on Pickup board.

Interaction and real-time behaviour

- **Live feed:** a new listing slides into the list and drops a pin on the map; a claimed one fades out for other receivers.
- **Hover and select:** hovering a card highlights its pin; selecting a pin scrolls the list to its card.
- **Claim:** the button shows a spinner, then the status pill changes. If someone else won, a toast says "Just claimed by another organisation" and the card is removed.
- **Status stepper:** four steps (Available, Claimed, In transit, Delivered) fill in as events arrive, with the time of each step.

- **Expiry:** countdown turns orange under 60 minutes and the card moves up the list.
- **Connection state:** a small dot in the header shows live or reconnecting; the feed refetches after a reconnect.
- **Empty states:** "Nothing within 5 km right now. Try a wider radius" with a one-click radius increase.
- **Loading:** skeleton cards instead of spinners.

Accessibility, responsive behaviour and tone

- **Contrast:** text meets 4.5:1 against its background; status never relies on colour alone.
- **Touch and keyboard:** targets at least 44 px; full keyboard navigation; visible focus ring in primary green.
- **Screen readers:** live status changes announced through an `aria-live` region; map has a list alternative.
- **Breakpoints:** 360 px (single column, map behind a toggle), 768 px (list with map drawer), 1200 px (list and map side by side).
- **Mobile first:** volunteers use phones on the move, so Pick up and Deliver are large bottom-fixed buttons.
- **Tone:** warm, short and practical. Say "Claim this food" not "Submit request"; give time and distance in plain units.
